Query 1 — Orders Joined to Customer, Product, and Category

This query joins all three tables so each order line shows the customer's name, the product's name and category, and a calculated line revenue (quantity × unit price). All 150 orders returned successfully, confirming that every order matched a valid customer and product.

Query 2 — Total Revenue per Customer

This query shows how much each customer has spent in total. The highest-spending customer is Nomvula Coetzee.

Query 3 — Total Revenue per Product Category

This query shows which product category drives the most sales. Beauty led all categories with R87,091.16, followed by Home (R72,908.94), Fashion (R49,810.15), and Electronics (R47,524.61). This shows that Beauty and Home products are the strongest revenue contributors.

Query 4 — Top 5 Customers by Total Spend

This query ranks customers by total spend and limits the output to the top 5.
